Assignment:

→ Create an application in Android which has Facebook and Google login support integrated. User can login into the app using their Facebook credentials or Google credentials. If user clicks on login with button they will be redirected to Facebook app/website. Once they login into the Facebook or authorize the application, the application will display message as ""Welcome User name"". Same is applicable for Google flow as well.

→ Design the application in Android with 3 buttons named as Android, iOS and Windows. On click of Android button it will display message as ""Android is developed by Google"". On click of iOS button message will be displayed as ""iOS is developed by Apple"" and on. third button click message will be displayed as ""Windows is developed by Microsoft"". Please German, Japanese and Russian provide localization for all text. Also make sure that Android, iOS and Windows words are not localized.
